## New 40 kW for Baxi's popular Duo-tec combi HE range

To meet the growing demands of the market, leading UK boiler manufacture Baxi has added a 40kW output to its popular Baxi Duo-tec Combi HE range.

With a flow rate of 16 litres/minute and the same dimensions as the 24, 28 and 33kW models, the Baxi Duo-tec Combi 40 HE is particularly suitable for dwellings with an increased demand for hot water.

Raxa Chauhan, Product Manager for Baxi, said: "The new 40kW model gives installers a complete portfolio, with a product to offer for practically every domestic application.

"For householders combi boilers are convenient and flexible because they don't have to worry about programming timers – hot water is on tap almost instantly. They will benefit from substantial savings on their fuel bills by only heating the water they use.

" And they can enjoy added peace of mind knowing that the Baxi Duo-tec Combi HE range has been subjected to extensive life cycle testing and comes with a two year parts and labour warranty."

The Baxi Duo-tec Combi HE is supported by **heateam**, Baxi's after sales service division. **heateam** is the largest OEM service provider in the UK, and operates a swift and effective response service for installers and homeowners.
