Success for Baxi at CIH

Renewable energy products on UK boiler manufacturer Baxi's stand attracted a huge amount of attention at the Chartered Institute of Housing exhibition at Harrogate.

The working model of Geoflo, Baxi's ground source heat pump, demonstrated how heat could be generated easily and cleanly. There were also many enquiries regarding the Solarflo solar domestic hot water package.

Paul Baxter, UK Social Housing Sales Director, was delighted with the interest from delegates who attended the exhibition. "Social housing providers, local government representatives and residents were all interested in learning more about renewable energy and how they can do their bit to help the environment and achieve Government targets.

"They were equally keen to examine the high efficiency boilers we had on display. This confirms to us how aware everyone is becoming of the effect that heating their homes has on the climate, and their growing social responsibility. This was initially driven by Government legislation and social housing initiatives, but individuals are picking up the environmental baton and running with it."

For more information on Baxi's portfolio of high efficiency boilers and renewable products, please telephone 08706 060 623.
